nClient for Education

Protection On and Off Network
Safeguard Students Anywhere, Across All Devices, All Platforms

Netsweeper's nClient extends our core nFilter web filtering, monitoring, and policy management capabilities to remote devices. The two products work together seamlessly, so administrators can easily manage all devices from a central source with zero impact on network latency. Compatible with every device and operating system, nClient maintains the same level of protection on and off network to ensure policy and regulatory compliance and prevent harmful content from reaching your students. Never feel pressured to choose between educational online content or student protection when Netsweeper's nClient offers both.

Granular Social Media Controls

Detailed Reporting

> " For us flexibility was key. That's not an easy process to find a solution that will work with every device... The fact that your solution provides support for all of those was huge. "

Todd Mein, Technical Support Manager, Shiawassee RESD

AI-Enhanced, Real-Time Categorization

In a world where millions of URLs are created every day, we find new content first with real-time analysis that is often missed by other security and filtering products. Through AI technology and 20+ years of experience, we continuously analyze and categorize content across over 90 categories and 47 languages to ensure students are always protected.

Multi-Tenant Solution

Multiple schools can be managed through one interface giving IT administrators the ability to create their own filtering policies and generate reports for their schools. Designed to provide top-down visibility at all levels, along with customized, granular, and flexible control over content filtering features of each tenant's own instance.
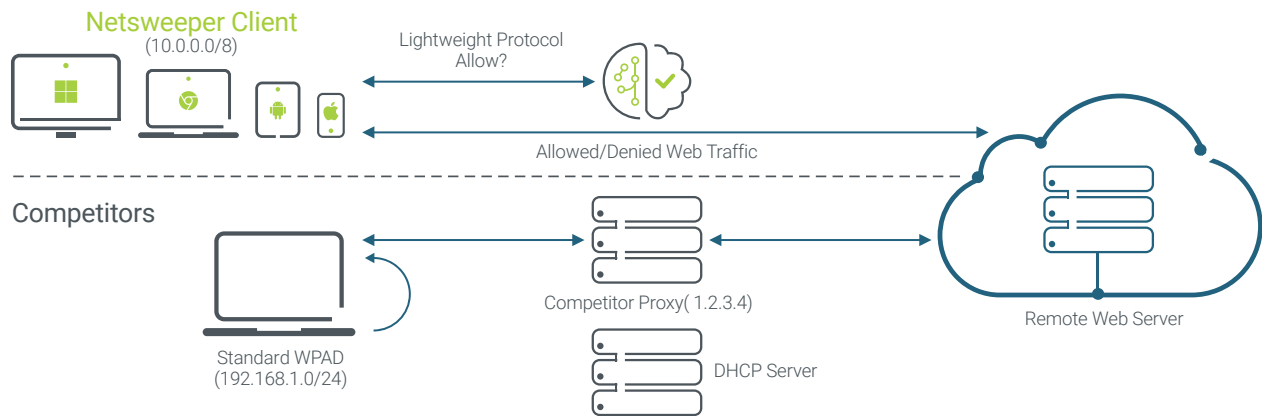

In-Depth Reporting

Why settle for generic insights when you can get tailored and comprehensive reports that examine every aspect? We offer straightforward templates, scheduling options, and customizable reports that delve deeper into data. This rapid but detailed analysis of online activity gives you all the crucial information you need to protect your students.

How We Differ

Using our superior and unique client, we push out complete SSL decryption and policy enforcement right to your school devices, avoiding any unnecessary latency and poor performance that occurs from traffic being proxied back and forth between servers.

Netsweeper Client
(10.0.0.0/8)

Allowed/Denied Web Traffic

Competitors

Standard WPAD
(192.168.1.0/24)

Competitor Proxy(1.2.3.4)

DHCP Server

Remote Web Server

Full SSL Decryption

Rather than filtering only top-level domains, block prohibited content and enhance student safety by monitoring network activity at a granular level.

All Devices & Platforms

nClient can be installed on Windows, OSX, Chrome, iOS, and Android devices, monitoring internet traffic even when they are not connected to the school network.

Flexible Social Media

Manage web and app-based activity on social media platforms like YouTube, Instagram, LinkedIn, and Facebook.

Scalability

Regardless of size, we can scale to meet your needs without impacting speed or reliability.

Customizable Control

Role-based access provides unique levels of control and security for every system user, including district, school, teacher, administration, and IT.

iOS Loopback

Our patented no PAC file approach for iOS allows all filtering and decryption to be done on the device, reducing latency, and increasing scalability.

US Cloud Services

Netsweeper's cloud-based filtering solution provides an ecosystem of protection that extends from your network to the client for complete protection whether students are in the school or learning from home. The flexible, scalable, and compatible features of our cloud-based internet filtering solution will enable your school to save money, improve security, and protect your students. Strategically designed for simple installation and management, nClient provides all the same protection and policies of a device on your internal network without bandwidth issues.
