

# nFilter for Education

## Prioritize Digital Safety with Real-Time Web Filtering

### Making the Internet a Safer Place for Students to Learn

nFilter is Netsweeper's AI-driven web filtering platform that uses dynamic categorization to scan, analyze, and sort billions of URLs, preventing harmful online content from reaching the students in your care. Whether you are a school, a district, or an IT administrator, we know your list of challenges continues to grow. With nFilter you no longer need multiple solutions to fit all your needs. Get the support you need with a filtering solution easily managed from a central control panel, with the flexibility to create and enforce your own policies while maintaining the highest level of protection across any network.

#### Designed for Education

Manage multiple schools from a single interface to reduce costs and increase efficiency. IT administrators create school level filtering policies and generate reports for individual locations, as well as maintain top-down visibility at all levels. A system easy to use while offering customized, granular, and flexible control over content filtering features of each tenant's instance.

#### Dynamic Categorization

In a world where millions of URLs are created every day, we find new content first with real-time analysis that is often missed by other security and filtering products. Through AI technology and 20+ years of experience, we continuously analyze and categorize content across 90-plus categories and 47 languages to ensure students are always protected.

#### Scalable & Flexible

Whether it's one school, a district, or multiple districts we can scale on demand to meet your changing needs. Our scalable and flexible solution can accommodate any requirements without impacting speed or reliability.

It was the type of ease that we were looking for. We needed something that was going to filter based off of different platforms, whether it was a Chromebook, a Windows device, a MacBook, or an iPad.

Jackie Cartens, Director of Technology, Shiawassee RESD

## Key Features

### Full SSL Decryption

Rather than filtering only top-level domains, block prohibited content and enhance student safety by monitoring network activity at a granular level.

### All Devices & Platforms

nClient can be installed on Windows, OSX, Chrome, iOS, and Android devices, monitoring internet traffic even when they are not connected to the school network.

### Flexible Social Media

Manage web and app-based activity on social media platforms like YouTube, Instagram, LinkedIn, and Facebook by selecting the specific features you want to block or allow.

### SafeSearch Enforcement

Block inappropriate or explicit content across popular web search engines including Google, Bing, and YouTube.

### Customizable Control

Role-based access provides unique levels of control and security for every system user, including district, school, teacher, administration, and IT.

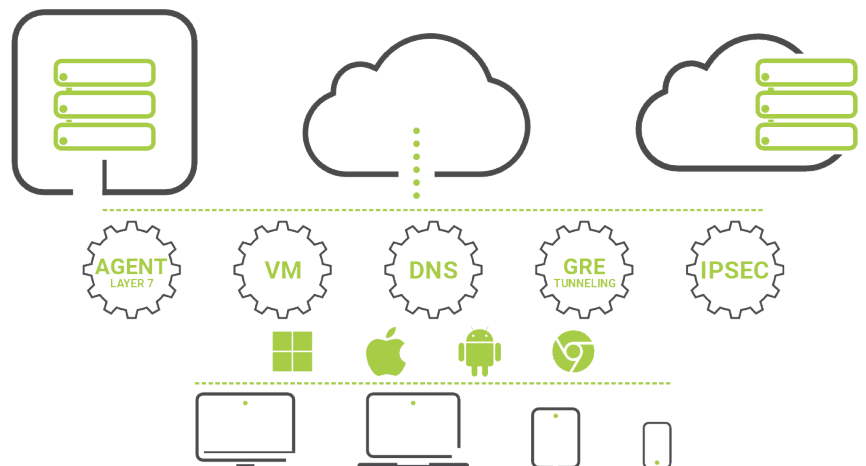

### In-Depth Reporting

Streamlined templates, scheduling options, and customizable reports that dig deeper and offer analysis on student's online activity.

## Deployment Flexibility

Our filtering solution integrates seamlessly with your existing network infrastructure, providing the fastest, easiest, and option for K-12, especially in budget constrained districts. Choose the deployment option that's right for your district or school.
