

# nsCLEAR

## Simplify Tax Enforcement and Boost Revenue Secure, Fast, eCommerce Tax Collection and Remittance

Enforce your country's tax laws and collect e-commerce sales taxes seamlessly with nsClear, Netsweeper's VAT collections and enforcement solution. Positioned in a country's gateway, our platform collects the tax from an e-commerce transaction and remits it to the appropriate jurisdiction anywhere in the world quickly and securely. nsClear strengthens government tax collection capabilities by removing the responsibility of collection and remittance from the merchant or transporter. Our advanced platform enables seamless enforcement and collection of e-commerce sales tax and transactions so governments can enforce their tax laws securely and cost effectively.

Countries are losing **\$483B** in tax a year to global tax abuse.<sup>1</sup>

### nsClear Tax Solution

It is Netsweeper's position that only governments should collect the VAT within their countries, not online retailers such as Amazon or service providers such as Netsweeper. We put your government in control of your VAT collection, while our platform nsClear enables you to securely enforce, collect, and remit ANY e-commerce tax transactions across jurisdictions worldwide quickly, safely, and at the lowest cost possible. Netsweeper transfers our tools, technology and patents to your government to empower the only entity that should ever receive e-commerce taxes. Rather than trying to force other stakeholders into collections and remittance roles, Netsweeper partners with and provides you with the necessary platform tools and world wide web reach.

#### AI-Driven Technology

Netsweeper's 24-year history with internet regulatory compliance technology using advanced AI technology enables us to deliver a countrywide enforcement tool to both accurately identify and/or block non-compliant e-commerce merchants, regardless of their location. We deliver this with zero impact to ISP networks using our proprietary internet content categorization technology.

#### Seamless Integration

Our nsClear solution seamlessly integrates into any third-party payment system and does not require e-commerce merchants to change their existing payment gateway – as such, integration with our system and overall compliance will be far greater as these companies choose extremely specific payment processors that meet the unique criteria of their business/ operating model etc.

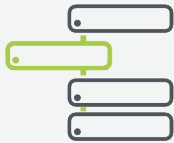

#### Identify and Block

It is no longer enough to make tax collection an option for multi-national corporations in your country. nsClear is more than a solution that simply blocks payments at the payment gateway. Ensure successful tax remittance with the ability to both identify and block non-compliant e-commerce website and apps on a countrywide basis.

**\$312B** of this tax loss is due to cross-border corporate tax abuse by multi-national corporations.<sup>1</sup>

## Key Features

### Platform Agnostic

Impartially handles the collection of VAT, ensuring compliance with regulations, flexibility, and smooth integration.

### Scalability

Seamless growth and adaptability to handle increasing transaction volumes without compromising performance or effectiveness.

### Data Security

We prioritize the protection of sensitive information to guarantee adherence to regulations and prevent financial and reputational risks.

### Automated Data Capture

Streamline and expedite the data entry process to reduce manual errors, saving time and improving efficiency.

### Real-Time Monitoring

Leave no detail unnoticed. Promptly identify and resolve any issues including transaction errors or potentially fraudulent activities.

### Compliance Verification Tools

Ensure every business accurately reports and remits the appropriate taxes to minimize revenue leakage.

### Supports Auditing and Risk Assessment

Analyze the audit trail and risk assessment with tools to identify taxpayers and sectors who are at high risk of non-compliance.
